

May 2007

Hello Jane,

*In my last business I manufactured and distributed commercial laundry chemicals and serviced commercial and healthcare laundries.*

*One of our primary concerns with healthcare laundry was to make sure the laundry, especially personal laundry, was ph neutral and had no bleach residue. Any residue of detergent or bleach could easily irritate geriatric skin and result in rashes and bedsores. When I saw for the first time a Laundry Pure Unit at Woodview Healthcare facility in Fort Wayne, IN I was amazed.*

*The idea that you could successfully clean and disinfect with RCI technology generating friendly oxidizers and silver ions Healthcare laundry with their challenging incontinency issues was hard to imagine.*

*When I first saw the Laundry Pure unit at Woodview I ask Dorothy Kelly, the executive housekeeper, to tell me about it. She immediately thrust some personal linen in my face to smell the fresh outdoors smell. She then went on for at least fifteen minutes raving about how the Laundry Pure unit with no hot water, no detergent, no bleach or softener was actually cleaning better than her traditional detergent system.*

*The really good news was that their nursing staff reported a significant reduction in patient skin issues, rashes and bedsores.*

*The Laundry Pure is used on residential type washers that Woodview uses for personal linens only. They are using commercial laundry units for the towels and bed linens. Dorothy stated that the Laundry unit more than paid for itself in 6 months with chemicals saved.*

*Best regards,  
John*
